USER MANUAL · EXCEL ENGINEERS, SALEM

How to use the Excel Engineers ERP

This guide walks you through every screen, from sending a quotation to delivering the pumps. Each part says what the screen is for, which buttons to press, and what happens next.

Web address: **erp.srv1821420.hstgr.cloud**

Works in: **Chrome, Edge, Safari, Firefox**

On: **computer, tablet and phone**

11. Customers and Suppliers
12. Strategic Insights
13. Notifications
14. Staff, Activity Log, Settings
15. Questions and fixes

1 Signing in

Every person has their own login. There are two kinds of account.

Owner

Sees everything: purchase costs, stock value, Analytics, Staff and the Activity Log. Can delete quotations.

Staff

Makes quotations, orders and purchase orders, and updates stock. Purchase costs and stock value are hidden.

1. Open the web address in your browser.
2. Type your **email** and **password**, then press **Sign in**.
3. You land on the **Dashboard**. You stay signed in for the working day.
4. To leave, press **Log out** at the top right, or the button beside your name at the bottom of the menu.

Keep your password private

Never share one login between two people. Ask the Owner to create a separate Staff login for each person, so the Activity Log shows who did what.

2 Finding your way

The screen has three parts: the menu on the left, the top bar, and the page in the middle.

The menu (left side)

- Pages are grouped under headings: **Sales**, **Orders & Buying**, **Stock**, **Contacts** and **Strategic Insights**.
- Press a heading's arrow to fold or open that group. The app remembers your choice.
- The page you are on is highlighted in blue.
- A small number beside a page (for example • 3 next to Orders) shows how many items are waiting there.

- Press ◧ at the top to shrink the menu to icons only, and press it again to open it.
- **Staff**, **Activity Log** and **Settings** sit at the bottom, above your name.
- On a phone, the menu opens from the ☰ button at the top left.

The top bar

- The left side shows which page you are on.
- **Search or jump to…**: press it, or press `Ctrl` + `K`, then type a page name or a quote number to jump straight there.
- The 🔔 bell opens Notifications. The number on it is how many things need attention.
- The 🌙 moon / sun button switches between **light** and **dark** mode. The app remembers your choice.
- `Log out` signs you out.
- The top bar stays in place while you scroll.

> **Tip**
> Lists remember their search and filters in the web address. You can bookmark a filtered list, or refresh it, and it stays the same.

3 Icons and colours

The same icons and colours are used everywhere, so once you know them you can read any screen at a glance.

Menu icons

ICON	PAGE	WHAT IT IS FOR
	Dashboard	Today's summary: money in quotes, what needs doing, win rate.
	Quotations	Create, send and track price offers to customers.
	Negotiations	Quotes where the customer asked for a better price.

ICON	PAGE	WHAT IT IS FOR
	Orders	Accepted quotes, from stock check to delivery.
	Purchase Orders	Orders you place with your suppliers.
	Inventory	Stock on hand, reserved and available.
	Products	Your catalogue: models, prices, GST, suppliers.
	Customers	The companies you quote to.
	Suppliers	The companies you buy from.
	Analytics	Sales, conversion and reorder reports (Owner only).
	Quote History / Activity Log	Every version of every quote / every change made by anyone.
	Deal Tracker	One row per item, from first quote to delivery.
	Staff	Create and manage logins (Owner only).
	Settings	Company details and the low-stock level.

Buttons you will see often

BUTTON	WHAT IT DOES
+ **New …**	Creates a new record: quotation, product, customer or supplier. It is the black button at the top right of the page.
Search box	Filters the list as you type: name, model, SKU, quote number or customer.
Bell	Opens Notifications.

BUTTON	WHAT IT DOES
Edit / View	Opens a record. Accepted quotes open as **View** because they can no longer be changed.
PDF / Download	Downloads a document to send or print: quote, purchase order or report.
Excel	Downloads the list as a spreadsheet (Deal Tracker).

What the colours mean

LABEL	MEANING
• Clear • Accepted • Received	Done or all good. Nothing to do.
• To do • Low • Pending	Needs attention soon.
• Declined • Out	Lost, or out of stock.
• Negotiation 2 • Sent	Information, such as a stage or a status.

4 How the work flows

Everything in the app follows one path. Knowing it makes every screen make sense.

Quotation → Negotiation (if asked) → Accepted → Order →
Purchase Order (if stock is short) → Goods received → Delivered

- When you **accept** a quote, the app creates the **order** by itself and reserves the stock you have.
- If some items are short, the order waits for stock, and a **draft purchase order** is prepared for each item's supplier.
- When you **mark the purchase order received**, the stock goes into Inventory, and waiting orders are filled automatically, oldest first.

- You never have to type the same thing twice.

5 Dashboard

Your first look of the day. Every box can be clicked to open the list behind it.

Five summary cards

Total sales (Owner) or accepted quotes (Staff), pending quotations and how many need a follow-up, active negotiations, pending orders, and stock alerts.

Sales Overview

Delivered orders with GST by month: bars for the value, a line for the number of orders. Pick the period at the top. Owner only.

Quote Value by Stage

How your quoted money splits between awaiting reply, in negotiation, accepted and declined.

Pipeline

The count and value at each stage. Click a stage to open those quotes.

Follow-ups Due

Quotes with no reply, orders ready to deliver and purchase orders to send, each with an **Open** link.

Recent orders, top products, quick actions

The latest orders, your best-selling products (Owner), and shortcuts to start a quotation or open Customers, Products and Purchase Orders.

6 Quotations

Make a price offer, download it as a PDF, and record the customer's answer.

Make a new quotation

1. Press **+ New quotation** (on the Dashboard or the Quotations page).

2. Choose the **customer**. If they are new, add them in Customers first.
3. Choose the **offer level**:
   - **Basic Offer**: item details, prices, terms and totals. No technical specifications.
   - **Intermediate Offer**: adds a short technical details panel (key specifications) before the scope of supply and price.
4. Add the items: pick a product; its HSN/SAC code fills in. Type the **quantity** and your selling **rate**. Each line's value (rate × quantity) and the total update as you type.
5. As the Owner, you see the product's landed price and your margin under each line. They never print on the quotation.
6. Add any discount and the terms, then press **Save**. The quote gets its number automatically, for example **ESQSP-26-4**.
7. Press `PDF` to download it and send it to the customer.

Record the customer's answer

BUTTON	WHEN TO USE IT	WHAT HAPPENS
• Accept	The customer confirmed the order.	An order is created automatically and the stock is reserved.
• Negotiate	The customer wants a better price.	A new version is made (...N1, ...N2) with the old price kept for reference.
• Decline	The customer said no.	You pick a reason from the list (Price too high, Lost to competitor...) or choose **Other** and type it.

After each of these, the app takes you back to the list.

> **Always choose a decline reason**
> The reasons feed the Analytics page, where you can see why quotes are lost and what to change.

Deleting

Only the Owner can delete, and accepted quotes can never be deleted. On a negotiation, you can delete just the latest round (the earlier version opens again) or the whole quote with all its versions. A deleted quote cannot be brought back.

7 Negotiations

Every quote that has gone past its first price is listed here, with its round number.

1. Open the negotiation with **Edit**.
2. Change the rates you agreed on. The PDF shows the **old rate** beside the new one, so the customer sees the reduction.
3. Save, download the PDF and send it.
4. When the customer answers, press Accept, Negotiate again, or Decline, just as on a quotation.

Watch for "Stuck in negotiation"

A quote that has gone 3 rounds, or has had no change for 15 days, shows on the Dashboard. Call the customer and close it.

8 Orders

Orders are created by accepting a quote. You don't create them by hand.

STATUS	MEANING	WHAT YOU DO
Waiting for stock	Some items are not in stock yet.	Send the purchase order to the supplier (see next part).
Ready to deliver	All items are reserved in stock.	Dispatch the goods, then press **Product Delivery** on the order.

STATUS	MEANING	WHAT YOU DO
• Delivered	The customer has the goods.	Nothing. It now counts in sales.

You don't need to move orders along by hand
When the stock arrives, a waiting order becomes Ready to deliver by itself.

9 Purchase Orders

Orders you place with suppliers. Numbered automatically, for example **ESPO-26-1**, on the Excel Engineers letterhead with CGST 9% + SGST 9%.

1. A **draft** is made automatically when an order is short of stock.
2. Open it, check the quantities and rates, and download the PDF (the Owner downloads it, because it shows purchase rates).
3. Send it to the supplier, then press **Mark as sent**. It leaves the "not sent" list on the Dashboard.
4. When the goods arrive, press **Mark as received**. The stock is added to Inventory, and waiting orders are filled.

Only mark received when the goods are physically in
Receiving adds stock straight away, and orders may be marked ready to deliver because of it.

10 Inventory and Products

Inventory

- The cards at the top show number of products, • Low stock, • Out of stock, products missing a supplier, and stock value (Owner only).

- Every row shows three numbers. **On hand** is what is on the shelf. **Reserved** is kept for orders. **Available** is what you can still sell.
- Use the **All / Low / Out / OK** buttons and the supplier and category boxes to filter.
- Press **Missing supplier** to see products without a supplier, and set one right in the row.
- **Adjust** changes the count after a stock check. Always write the reason. Adding stock this way also fills waiting orders.
- **History** shows every stock movement: who, when, why.

Products

- Press **+ New product** to add one: name, SKU/model, category, supplier, selling price, purchase cost and GST.
- **Import products** loads many products at once, with a progress bar. Blank cells leave existing values unchanged.
- Staff cannot see or set purchase cost; only the Owner can.

> **The low-stock level**
> A product shows **● Low** when its available stock drops to the level set in Settings.

11 Customers and Suppliers

Customers

Add the company name, contact person, designation, GSTIN, billing address (line 1, line 2, city) and shipping address (line 1, line 2, city, notes) once. Every quotation reuses them.

Suppliers

Add each supplier once. Link products to them so purchase orders go to the right company automatically.

Several emails and phone numbers

Press **+ Add email** or **+ Add phone number** to add as many as you need. Press × beside one to remove it. The first one is used on documents.

Import from Excel or PDF

1. On Customers or Suppliers, press **Import** and choose an Excel (.xlsx) or PDF file.
2. The app reads names, contacts, emails, phones, GSTIN and addresses, and shows them in a table.
3. Check every row, correct anything, and remove rows you don't want.
4. Press **Save**. Nothing is saved before this step.

> **Check GST numbers**
> They print on quotations and purchase orders, so a typing mistake shows up on every document.

12 Strategic Insights

Analytics (Owner only)

- Choose a period: this month, this year, or your own dates.
- You can see:
  - quote conversion and why quotes were declined
  - sales from delivered orders, with GST
  - repeat customers and top products
  - discount given and time to close
  - open pipeline
- **Reorder suggestions** tell you what to buy, based on the last 90 days of sales, a 14-day supplier lead time and 30 days of cover.
- Press **PDF** to download the full report.

Quote History

Every version of every quote, with the price change between rounds. Download as PDF.

Deal Tracker

One row per item, following it all the way:

- customer, quote date, quoted and final price, discount
- result, order, supplier and purchase order
- goods received and delivered date

Filter by stage or date, and download as **Excel** or **PDF**.

13 Notifications

The bell collects everything that needs a follow-up, so nothing slips.

- Quotes with no reply for 15 days.
- Orders ready to deliver, or waiting for stock for 7 days.
- Purchase orders not sent, or sent 7 days ago and not yet received.
- Products at critical stock.

Once a day, a short pop-up shows what's new when you open the app. Press **Check again** on the Notifications page to refresh the list; a message confirms it.

14 Staff, Activity Log, Settings

Staff (Owner)

Create a login for each person, choose Owner or Staff, reset a password, or switch a login off when someone leaves. There is always at least one Owner.

Activity Log (Owner)

A record of every sign-in and every change: who did it, what, and when.

Settings

Company name, default GST rate, the low-stock threshold, the theme (light or dark), and changing your password.

When someone leaves the company

Switch off their login the same day in Staff. Their past work stays in the records.

15 Questions and fixes

▼ The screen looks old or a change is not showing.

Press `Ctrl` + `F5` (on Mac, `Cmd` + `Shift` + `R`) to reload the latest version.

▼ I was sent back to the sign-in page.

Your session ended after a long break. Sign in again; nothing you saved is lost.

▼ I can't see Analytics, Staff or purchase costs.

These are for the Owner only. Ask the Owner if you need a figure.

▼ A product has no price or GST in the quote.

Fill in the selling price and GST on the product in Products. New quotes will then pick them up.

▼ I accepted a quote by mistake.

Accepted quotes can't be undone from the screen, because an order and stock reservation were made. Contact your administrator.

▼ Stock count is wrong after a physical check.

Use **Adjust** on the Inventory row and write the reason, for example "Stock check 30-Sep". Never re-import to fix a count.

▼ Can I use it on my phone?

Yes. Open the same web address. The menu opens from the ☰ button, and tables scroll sideways.

▼ Who do I contact for help?

Contact your system administrator at Excel Engineers.
